

Why Eco-Protective Products

As Green Building and Sustainable Design industry continues growing, EPP aims to be the preeminent manufacturer and provider of eco-friendly, high performance paints and coatings. Whether for new construction or remodeling an existing home, office, or industrial facility, evidence indicates that 'green' products and design techniques deliver measurable improvements to the environment, long-term value, and the most favorable Return on Investment. Each of Eco-Protective Products' paints and coatings deliver tremendous value, are of the highest quality, and are at the forefront in 'green building' innovation.

BIO SHIELD INTERIOR COATING

Why Bio-Shield?

- Contains ACT™ a non-leaching silver composite antimicrobial which is ideal for hospital and institutional environments
- Produces a durable, scrub resistant finish that withstands moisture and resists dirt pickup – key conditions that promote mold & mildew growth on the paint film
- Designed to provide antimicrobial (mold-resistant, anti-fungal) properties to the surface of the dried coating film.
- Passes severe ASTM performance tests even when subjected to combined strains of mold & mildew spores
- Contains ACT™ an antimicrobial that inhibits the growth of odor causing microbes on the dried paint film
- May be used over any quality waterproofing finish to resist mold and mildew growth on the paint film
- Ideal for Commercial or IAQ Remediation as well as for Residential use where moisture, bacteria, mold, mildew and algae may be a concern.
- Provides an antimicrobial barrier resistant to bacteria proliferation on the paint film
- Using BSIC reduces facility downtime, maintenance costs, and repainting frequency

Silver Technology

Silver is a natural element that, for centuries, has been recognized as a safe type of preservative and antimicrobial. Its uses are far reaching, and it can be found in cosmetics, textiles, medical products and even wound care because of its broad-spectrum antimicrobial properties.

At Eco-Protective Products, we consistently try to provide consumers products that are environmentally friendly as well as exceed traditional performance standards. With Bio-Shield Interior Coating we feel we've continued that legacy.

ACT™ composite silver technology is the only silver antimicrobial manufactured in the **United States**. Unlike organic antimicrobial products, it does not leech or risk harm to users or the environment.

Eco-Friendly

- Manufactured in the United States
- **Only** Silver Composite manufactured in the **USA**
- ZERO VOC & **NO-ODOR** Formula
- Finishes Available: Flat, Eggshell, Semi-Gloss
- Qualifies for **LEED Credits**
- **Sustainable** – Extends painting life-cycle
- **Does not contain: Lead, Formaldehyde, Ethylene Glycol, Toluene, or Ammonia.**
